

CRANE Tender Announcement

Apply until 6th of November!

for up to 4 650 000€ in three phases

CRANE will devote 4,65M€ to procure a new technological solution to facilitate effective, efficient, and user- friendly health data-driven services for improving the wellbeing of patients that wants to self-manage and improve their chronic conditions.

The CRANE solution aims to make the citizens entire public and personal health data automatically accessible and provides through intelligent technologies new smart and tailored insight providing the citizen with open and trustworthy control of their own data and its use.

We expect to procure from bidders to develop and/or integrate

- 1) an open and interoperable platform hosting CRANE core services;*
- 2) secure health data management through a virtual data-lake;*
- 3) a solution for management of informed consent and building trust;*
- 4) services for self-management of three selected chronic conditions;*
- 5) evidence-backed services for adherence, engagement and motivation.*

CRANE procurement will be implemented as a 3-phases competition where PCP contracts are assigned under the supervision of the buyers' group.

Phase 1: five bidders with a 50,000€ budget each for the development of a feasibility study. **Phase 2:** three selected proposals from Phase 1 will get 500,000€ each to develop a prototype. **Phase 3:** two suppliers from Phase 2 with 1,45M€ each for a Pilot Validation
